SD-WAN Lite

Simple, Reliable and Fast

Whether you're a small business or the largest enterprise, you know lost internet service can be costly. When your connection goes down, critical business applications don't run and your employees can't do their jobs. As you grow, your bandwidth needs also change. Slow internet connections can become your biggest frustration.

SD-WAN Lite from GTT increases reliability and improves performance by bringing two circuits together into one redundant, resilient managed broadband service.

Keep Your Business Up and Running

Simple
You don't want to maintain additional equipment or connections yourself; you just want it all to work. SD-WAN Lite is a complete managed service, including equipment, circuits, installation and repair. GTT has relationships with over 3,500 regional access partners, enabling us to deliver affordable, diverse broadband anywhere in the world. Leave the networking to GTT while you focus on running your business.

Reliable
Settling for a single connection puts your business at risk every day. SD-WAN Lite reduces that risk by bonding two separate broadband services into one. If one fails, the other takes over automatically.

Fast
Get the most out of your internet service with bandwidth aggregation and load balancing. SD-WAN Lite efficiently distributes your traffic across both broadband connections, making full use of your available bandwidth.
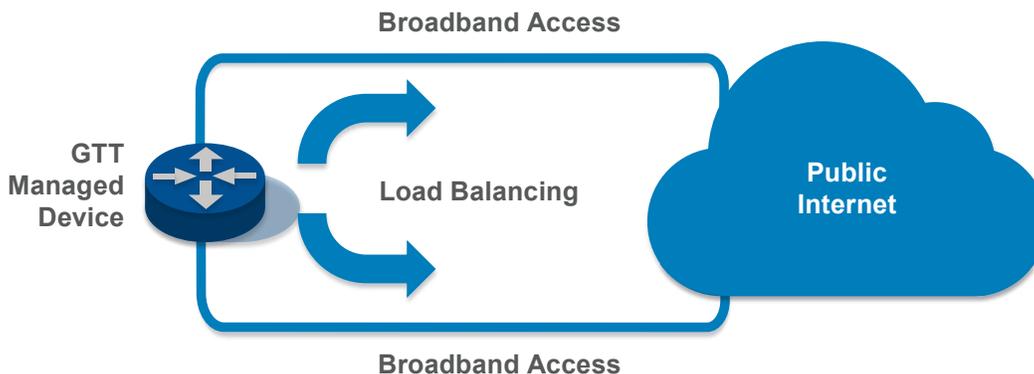

Key Features

- Dual internet with rapid failover

- Managed equipment

- 24x7 circuit monitoring

- Automated fault notification

- Proactive repair

- Cost-effective high bandwidth

- Real-time performance reporting on GTT's EtherVision web portal

- Global coverage, single source

- Bandwidth aggregation and load balancing
